

The Slider™ GDS is the first, prepacked graft tunneling system available. Its patented graft "protection" sleeve and easy to use attachment system enables insertion of the graft into a tunnel in a "no incision contact" fashion with the least amount of trauma possible. The graft glides through the tunnel with no contact by surgical gloves, surgical instruments or skin surface, maximizing infection prevention.

Benefits of the Slider™ GDS

- Easy “sutureless” graft attachment that makes it simple to attach, disconnect and reattach the graft to the tunneler.
- Double sheath system minimizes graft contact reducing the risk of graft contamination.
- Unique Slider™ sheath reduces the force necessary to pull the graft, making it easier to position and implant.*
- Reduces the stress on the graft minimizing weeping potential.*
- Eliminates “soaking” and “prewetting” of the graft during insertion.
- Reduced friction and less tissue dissection results in a tighter tunnel and less tunnel track bleeding.*
